A key requirement of compliance mandates and security standards such as ISO 27000, HIPAA, PCI DSS and others is that organizations must conduct a comprehensive and thorough assessment of the potentials risks and vulnerabilities to the confidentiality, integrity, and availability (CIA) of all sensitive, confidential information. These mandates require that organizations must complete a comprehensive and thorough vulnerability assessment on a regular schedule.

*bizSHIELD™ – An ecfirst Technical Vulnerability Assessment Service*

ecfirst developed the *bizSHIELD™* program to assist organizations in addressing the requirements of compliance mandates and all subsequent guidance documentation and settlement agreements.

As a part of the *bizSHIELD™* program, ecfirst identifies vulnerabilities from the outside (external) and inside (internal) the organization. Next, ecfirst develops recommended remediation activity, and associated risk priority. All remediation activities will be listed according to recommended implementation time bands in the *bizSHIELD™* Corrective Action Plan (CAP) table. The *bizSHIELD™* report is an actionable, documented risk analysis that provides both in depth and executive summary level findings appropriate to all audiences from administrators to the Board of Directors.

**Technical Vulnerability Assessment Service**

The ecfirst *bizSHIELD™* risk analysis program includes a technical vulnerability assessment to address compliance mandates with the objective of establishing and prioritizing compliance and security gaps. The ecfirst *bizSHIELD™* Technical Vulnerability Assessment Service supports several distinct components, including:

- External Assessment
- Internal Assessment
- Firewall Assessment
- Wireless Assessment
- Social Engineering Assessment
- Penetration Testing (Express)

When was the last time your organization conducted a risk analysis activity that included a technical vulnerability assessment?
External Vulnerability Assessment

ecfirst will identify vulnerabilities within client's Internet-facing infrastructure, and attached network systems. The ecfirst testing will analyze client externally accessible servers. Additional IP addresses can be assessed as required. Additional costs apply. Please discuss with ecfirst.

It is recommended that the testing include the following types of systems:
- E-commerce servers
- Internet or DMZ located Database servers
- Internet screening routers
- Internet-facing firewalls
- E-mail server
- DNS servers
- Servers storing or processing EPHI
- Web Applications
- Other sensitive systems

Internal Vulnerability Assessment

ecfirst will perform an internal network vulnerability assessment on client internal network infrastructure. This testing will verify that the security controls implemented on a sample set of five (5) selected hosts, including servers located in the IT Data Center or desktop PC images provide an adequate level of protection against network attacks.

Specific IPs must be provided by ecfirst's Point of Contact at client.

The ecfirst testing will analyze client internally accessible servers. Additional IP addresses can be assessed as required. Additional costs apply. Please discuss with ecfirst.

The Internal Network Assessment addresses the following areas:

- **Active Directory**
  - Review Identity and Access Management
  - Review passwords in use for complexity

- **Endpoint data loss**
  - Review the number of removable mass storage and communication devices connected to company systems

- **SNMP settings**
  - Identify systems that respond to default or easy to guess SNMP Community strings
Technical Vulnerability Assessment

- **SQL servers**
  - Identify servers with SQL services listening that allow connections from any host
  - Identify SQL services utilizing default or easy to guess credentials

- **Networked systems**
  - Identify vulnerabilities and configuration issues

**Firewall Assessment**

ecfirst will review the organization’s Internet-facing firewall to identify the current security posture in three critical areas:

- Rulebase configuration
- Current IOS (or other operating system) and patch revision release level
- Vulnerability assessment of configuration file

Rulebase configuration is critical to the integrity and operating security of a firewall. The rulebase should be tied to business requirements. Every rule that is configured on a firewall is essentially a permissible security hole into the company’s network infrastructure. Each of these rules should have a well defined business need for existing. However, many corporations open rules for testing and never close them when the test has completed. Additionally, many rules are opened up because of then-current business needs, but never closed or repaired once that need, or the corresponding business contract, has ended. This results in legacy access and a vulnerability providing a pathway into the internal network.

**Wireless Assessment**

Wireless networks are particularly vulnerable to attacks because it is extremely difficult to prevent physical access to them. The only advantage they have in this respect is that an attacker must be in relative physical proximity to the network, which can limit the pool of potential attackers. However, with the price of high gain antennas being extremely small, attackers can strike from much further distances with affordable ease. To secure a wireless network, an administrator should know what types of vulnerabilities exist and what types of attacks can exploit them.

The ecfirst testing will analyze client wireless accessible servers. Additional IP addresses can be assessed as required. Additional costs apply. Please discuss with ecfirst.

The WiFi Vulnerability Assessment will be done as part of the internal security assessment. War Walking is the approach/methodology used for the assessment and the scope is defined as:

- ecfirst will perform a wireless assessment at one location
- Discovering the Wireless Access Points visible within the location
- Identify potentially rogue devices - Rogue access points installed by employees without IT departmental consent.
Technical Vulnerability Assessment

- Determine the existing WiFi Security Infrastructure such as SSID protection; MAC filtering, VPN and encryption mechanism used (if any), and possibly supplicant certificates.
- Attempt to compromise wireless security after sniffing sufficient packets or performing man-in-the-middle attacks.

Social Engineering Assessment

Organizations with excellent security programs often spend large amounts of money on capital purchases to implement technical security controls. However, employees or contractors of the entity often prove to be the weak link in the security chain. Employee and contractor education is a key component to any information security program. Authorized members of the workforce have both authenticated access to information systems as well as physical access to facilities and secured areas.

During the social engineering assessment, ecfirst will attempt to gain unauthorized or inappropriate access to facilities, secured areas, documents, credentials, or confidential data. ecfirst security personnel will attempt to bypass security controls that are in-place in order to gain access to various assets. ecfirst will attempt to bypass electronic, personnel, and procedural controls during this assessment. ecfirst will document and present a very detailed record of successes, failures, controls bypassed, access achieved and information obtained during the assessment.

Penetration Testing (Express)

The ecfirst Express Penetration Test is less comprehensive than the full Penetration Test in scope as it only addresses external and internal technical vulnerabilities & threats; physical and personnel vulnerabilities and threats are not evaluated. A detailed technical Corrective Action Plan (CAP) is included in the bizSHIELD™ report to provide actionable directives for addressing the identified deficiencies.

The ecfirst Express Penetration Test for additional IP addresses can be assessed as required. Additional costs apply. Please discuss with ecfirst.

The ecfirst Express Penetration Test for will be broken up into distinct phases of analysis:

- External Penetration
  - Reconnaissance phase (including the Google Hacking Database), Web Applications and Networked Systems phases are all performed in 1 day
- The Internal Penetration (including the Wireless Penetration) is generally performed in 1 day during the onsite visit.
“ecfirst provides excellent value across a comprehensive portfolio of first rate solutions for regulations such as HIPAA | HITECH compliance, risk analysis, social engineering, vulnerability assessment, disaster recovery and business continuity. They are not just experts in these respective fields but are able to communicate and motivate corporate audiences to effect change.”

“ecfirst is an excellent business partner that focuses on long term, successful relationships through consistently successful project delivery.”

Joe Granneman, CTO & CSO, Rockford Health System

**About ecfirst**

ecfirst delivers complete end-to-end solutions for compliance information security. With over 2,100 clients across all States in the USA, ecfirst tailors its work to closely align with your requirements and culture. Whether your requirements include a resource to implement security controls and technologies, or develop policies and procedures, or comply with HIPAA, HITECH, PCI DSS, ISO 27000, ecfirst is flexible to address your workforce needs. Why ecfirst? Unconditional guarantee. Flat rate. Flexible services. And most important, we deliver and implement information security solutions world-wide. You will have one point-of-contact. The ecfirst process is based on one phone # for you to call, and one email address to work with. We want to simplify your experience. **Let’s get started!**

**Contact Us**

ecfirst is best positioned to be your turn-key compliance and security solutions partner. Our seasoned Practice Team and guaranteed prices will serve you best in meeting compliance and security requirements. I look forward to hearing from you and discussing how ecfirst can assist with jumpstarting your Information Security and Compliance initiatives. Thanks!

ecfirst Facts
- Established in 1999
- Clients in all 50 U.S. states
- Global experience includes Philippines, India, Middle-East, Canada, Africa
- Industry experience includes healthcare, IT, finance, government, and legal
- Privately held
- Unconditional guarantee for services delivered

Security Risk Assessment
Conduct a comprehensive risk assessment to identify compliance gaps and security vulnerabilities. Services also include vulnerability assessment and penetration testing.

On-Demand Consulting
Immediately add resources, off-site or on-site, to jumpstart your compliance and security projects. Flat rate pricing.

Managed Compliance. Managed Security.
Fixed monthly fee for a one to five year period, to manage your compliance and information security projects. Services include security risk assessments, policy and procedures development, training, consulting, remediation, certification, and more.

HITRUST Assessment & Certification
Jump-start your prerequisites to address the HITRUST CSF requirements with specialized ecfirst solutions for self-assessment, validation, and certification. With knowledge transfer every step of the way, ecfirst is positioned to be your trusted partner to manage your HITRUST CSF assessment through certification.

PCI DSS
Discuss your PCI DSS requirements with ecfirst. We can jump-start your PCI DSS initiatives with policies, risk assessment, procedure development, training & more.

Client Testimonials
“Nixon Peabody retained the services of Ali Pabrai, MSIE, CISSP as an expert in information security. Found Mr. Pabrai and his firm, ecfirst, as exceptionally responsive in supporting all our activities as requested on a timely and professional manner. His insight was valued and of significance.”
Linn F. Freedman, Partner
Nixon Peabody LLP

“Prime Healthcare and its network of 40+ hospitals is excited to have partnered with an organization — ecfirst — that is recognized in the healthcare industry as a leader devoted to enabling health systems to continually address information privacy and security regulatory requirements.”
Prime Corp.

Training & Certification
Fast track program for end users to learn the basics of HIPAA and HITECH regulations, including the HIPAA Privacy Rule.

The industry’s first and most comprehensive program on HIPAA and HITECH. Covers everything HIPAA-related including Transactions, Code Sets, Privacy, Security, and Breach Notification.

The world’s first program focused on compliance regulations and cyber security. Covers ISO 27000, PCI DSS, NIST, FISMA, HIPAA, and more.

The first executive training program on cyber security with an in-class exercise designed to enable the development of a cyber security program.

ISO 27000 Workshop
In-depth review of ISO 27000, 27001, & 27002.

Complimentary Brief! Schedule yours today.
