

Vulnerability Assessment

Penetration Testing of Internal, External and Wireless Infrastructure

Compliance requirements as well as rising threats to the information infrastructure are resulting in businesses conducting vulnerability assessment to establish the state of enterprise security. Such assessment typically includes external, internal, and wireless penetration testing.

ecfirst targets systems, devices and applications as identified in the scope of work. The testing typically includes, but may not be limited to, the following types of systems such as the Internet screening router(s), switch(es), firewalls, critical servers such as those in the data center as well as email, Web, and DNS.

At the project initiation meeting, the ecfirst Program Manager and your Point of Contact will determine and verify the scope of the project and deliverables, client personnel responsibilities, data gathering tasks, status meetings, and the handling of project problems. The ecfirst penetration team will devise a plan of attack before the vulnerability testing begins on network. Once the testing begins, we will scan the active devices for vulnerabilities. This typically includes all TCP and UDP ports. The next step is a manual validation of identified findings. The wireless assessment includes identification of rogue devices, open/vulnerability access points and the state of your wireless LAN security.

The information from internal, external and wireless scans then results in a customized report that is created exclusively for your organization that includes details on security gaps that can be exploited and recommended steps for remediation.

OUR COMMITMENT TO YOU

- 1) Plan and conduct penetration testing and vulnerability assessment
- 2) Analyze vulnerability assessment data
- 3) Develop recommendation to remediate discovered vulnerabilities

- 4) All penetration testing and wireless war driving work is only executed upon agreed to times/dates
- 5) All work is executed with the minimal impact possible to your staff or resources.

YOU NEED TO DETERMINE

- 1) Penetration testing for how many INTERNAL IP addresses.
- 2) Penetration testing for how many EXTERNAL IP addresses.
- 3) Wireless war driving for how many SITES.

OUR DELIVERABLE TO YOU

A detailed report that clearly establishes the state of your enterprise security. The report will be focused on findings identified as HIGH RISK, MEDIUM RISK or LOW RISK for each of the areas that is in the scope of work (internal, external, wireless).

Fixed Fee with No Expenses: Call for details and a customized proposal exclusively created for your organization.
